Designing for users with
dyslexia

Do...

Don't...

use images and diagrams to support text

produce blocks of text or text heavy pages

align text to the left and keep a consistent layout

This is easier to read.

justify text as this causes a river of white

This is harder to r e a d   b e c a u s e there's too much white space.

use bold for emphasis and a non-serif font

Good

use italics for emphasis and a serif font
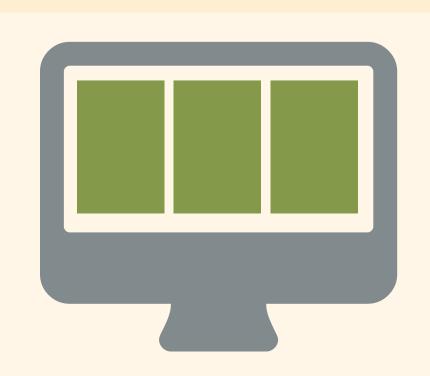

VERY BAD

use prompts and inline help text

What is your national insurance number?

Example: QQ 12 34 56 C

force users to rely on their memory

?

keep content short, clear and simple

communicate complex information on one screen
